

HEITHEM CHORFI

Full-Stack Software Engineer | Next.js, TypeScript, PostgreSQL

+213 794 20 66 55 | heithem.dev@gmail.com | heithemdev.com | linkedin.com/in/heithemdev
Bouira, Algeria | Open to Remote Roles | Available for Freelance Projects

PROFILE

Full-stack software engineer with 3 years of hands-on experience building commerce platforms, marketplaces, PWAs, and admin systems. Combines product-focused UI/UX with API design, secure data modelling, system design, accessibility, and performance optimisation.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, SQL, Java, C, C++, Python, HTML, CSS

Frontend & UX: Next.js, React, Tailwind CSS, responsive and mobile-first design, UI/UX, accessibility (WCAG/a11y), design systems, i18n, SEO, image optimisation

Backend & APIs: Node.js, REST API design, Server Actions, authentication and authorisation, server-side validation, email workflows

Architecture & Data: system design, PostgreSQL, Prisma ORM, schema and data modelling, indexing, query optimisation, transactions, modular architecture, scalability

Product & Delivery: Figma, product discovery, user flows, performance audits, Git, GitHub, Vercel, Neon, Cloudinary, AI-assisted development

EXPERIENCE

Technical Co-Founder | Réperto | Algeria | 2026 - Present | reperto-xi.vercel.app

- Designed and built an Arabic-first PWA for finding Algerian professionals by specialty and wilaya, with public profiles, saved listings, reviews, direct contact, and location-aware search.
- Architected the Next.js, Prisma, and PostgreSQL system for accounts, professional profiles, subscriptions, ads, moderation, analytics, and a dedicated admin workspace; launch is pending formal IP protection.

Freelance Full-Stack Software Engineer | Algeria / Remote | 2024 - Present

- Own end-to-end delivery for paid web products: discovery, UX, system design, database modelling, implementation, deployment, and post-launch iteration.
- Built e-commerce, marketplace, PWA, and admin systems with secure authentication, role-based workflows, server-side validation, and responsive, accessible interfaces.

SELECTED PROJECTS

Superette Laibi 2 | Grocery Ordering PWA | 2026 | superettelaibi.com

- Built an Arabic/French ordering PWA and admin system for a 6,000+ product catalogue, covering search, cart, orders, accounts, stock, categories, images, and fulfilment.
- Reported sales reached 1.25x their previous level in the first month, before paid promotion. The installable PWA also avoided separate Android and iOS builds, materially reducing launch investment.

Rimoucha | E-commerce Store | 2025 | rimoochat.com

- Built the multilingual, mobile-first storefront for a family-run handmade clothing business. It became the main channel for customer contact and order management, cutting repeated back-and-forth for the owner and customers.

Unimarcket | Social-Commerce Marketplace MVP | 2025 | unimarcket.com

- Designed and delivered the full-stack market-testing MVP in one month: authentication, email verification, seller and shop flows, listings, moderation, and local payment logic. Live auctions, product reels, and delivery-agency integrations remain roadmap features.

Said | Heavy-Vehicle Parts E-commerce Prototype | 2026 | said-web-seven.vercel.app

- Designed a mobile-first, installable shopping flow around part references, stock, delivery, and ordering. Unlaunched prototype using mock data.

EDUCATION

University of Béjaïa - Abderrahmane Mira | Engineering Program in Software Engineering | Béjaïa, Algeria

Program curriculum includes: advanced algorithms and complexity; software design and architecture; database administration, architecture, optimisation, and concurrency; advanced web and microservices; operating systems; networks and protocols; human-computer interaction; software testing and QA; performance modelling; agile project management; security; DevOps and cloud computing; mobile development; Big Data and NoSQL.

LANGUAGES

Arabic (Native) | English (C1) | French (B2) | Kabyle (Working proficiency)
